                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480
                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and noncarding tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived functed acid probes for measuring gene expression in a sample derived from thusan lung comprising single exon nucleic acid probes having one of 15614 nucleic acid sequences mentioned in the specification, or their complements or the 12187 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample collection of detectably labeled nucleic acids derived from human lung collection of detectably labeled nucleic acids derived from human lung areas identifying accors in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably algorithmically predicting at least one exon from genomic sequences of the event and (b) measuring the expression of experising (a) dentifying exons from genomic sequences for the method above mentioned microarray; assigning exons to a single exon probe, the exons should be assigned to a single gene; a peptide comprising one of incorparray having a probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that consistence and for identifying exons in a gene; a peptide comprising one of incorparay mentioned in the sequences, and for identifying exons in a gene; particularly using human clung derived manh and for the study of lung diseases such as asthma, lung cancer, chronic obstructive pulmonary diseases such as asthma, lung cancer, chronic obstructive pulmonary diseases such as asthma, lung cancer, chronic obstructive bulmonary diseases such as astima, lung corposed part of pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomtosis, pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic pulmonary dysplasia, primary ciliary dyskinesis, pulmonary hypertension and hyaline membrane disease. The present sequence is a single exon probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO specification, but was obtained in electron: at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                     g
                                                                                                                                                                                                                                           8
sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II) The polymuclectides are also used in diagnostics as expressed sequence tags for identifying expressed cand in recombinant production of (II) The polymuclectides are also used genes (I) is useful in gene therapy techniques to restore normal cation of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food stees expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Ab64197-AAS94564 represent novel human diagnostic coding sequences. Ab64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this electronic format directly from MIPO at the printed specification, but was obtained in electronic format directly from MIPO at from WIPO at the sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a

(II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic options of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences 69 GCCTGAGAGCACAGCGGGAAGGACAAGGATTGGGATATAAACTCAGGCATTCAAGCCAGC AACAGCAACCCCCTTTGGGTCCCCTCCCATTGTATGGGAGCTCTGTTTTCACTCTATTTC TCCCTTTGGATCCAGGGGTGTCCACTGTGCTCCTGATCCAGCGAGGTACCCATTGCCA 662 cecerecadararedecadedrefeceraterefeararadeaadegececearrece creccaaregeerraaageeregeearrerrecrecaregeraagreecegerregee AGCTCACTAAAATGCTAATCAGGCAAAAACAGGAGGTAAAGCAATAGCCAATCATCTATT ACTCTATTAAATCATGCAACTCTTCTGGTCCGTGTTTTTTAAATCAAGCTGAG ArcriscaAcreca----cAcrerrersererererrareracesercase CTTTTGTTCGCCATCCACCACTGCTGTTTGCCACCGTCACAGACCCGCTGCTGACTTCCA crircecricaccerceaccacrecrerrreceaccerrecacaccarcecreacre CTCCCGATCAGGCTAAAGGCTTGCCATTGTTCCTGCATGGCTAAGTGCCTGGGTTTGTCC 70 ACCGGCCTGCTAGCCCACGATCTGATGTTAATGACATCAAAGGCACCCCTCGTGAGGAAA 370 AGCCCGCTAAAATGCTAATTAGGCAAAAACAGGAGGTAAAGAAATAGCCAATCATCTATT 321 TAGTICTICAAATGGAACCCCAGATGCAGTCCATGACTAAAATCTACCGTGGACCCCTGG 10 TAAAACTACAAATGGAGCCCAAGATGCAGTCCAAGACTAAGATCTACGAGACCCTGG ACCGGCCTGCTAGACTATGCTCTGATGACATTGAAGTCACCCCTCCCGAGGAAA TCTCAACTGCACAACCCCTACTACACTCCAATTCAGTAGGAAGCAGTTAGAGCAGTTGTC rereagerecacaacereracraceceeaarreageaggaagaragagegregre 501 AGCCAACCTCCCCAACAGTACTTGGGTTTTCCTGTTGAGAGGGTGGACTGAGAGACAGGA GGCCAACCTCCCCAACAGCACTTAGGTTTTCCTGTTGAGATGGGGGACTGAGAGACAGGA CTAGCTGGATTTCCTAGGCTGACTAAGAATCCCNAAGCCTANCTGGGAAGGTGACCGCAT -----AGAG Gaps 17; Length 893; Seguence 893 BP; 223 A; 264 C; 202 G; 204 T; 0 U; 0 Other; 49.0%; Score 651; DB 5; Length 89 Ilarity 85.0%; Pred. The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. Regulatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immunotherapy. HERV-7q peptides and their coding sequences can be used in immunotherapy. HERV-7q peptides and their coding sequences can be used in immunotherapy. HERV-7q peptides and their coding protection against autoimmune diseases, particularly multiple sclerosis. The peptides may also be used (by sequence comparison) to detect/identify neuropathologies or other autoimmune diseases. The present sequence was New nucleic acid sequences of human endogenous retrovirus, HERV-7q, use for diagnosis, treatment and prevention of autoimmune and neurological 22893 TCAAAATTGAAGAGCTTTAGACTTGCTAACCTCTGAAAGAGGGGGAAGCTGTTATTTT ATCTGGAATCATTACTGAGAAAGTTAAAGAAATTTGAGATCGAATATAAATGTAGAGCAGA TCAAAATCGAAGAGCTTTAGACTTGCTAACCGCCAAAAGAGGGGGAACCTGTTTATTTTT -----TATGTTAATCA Gaps Sequence 46340 BP; 16104 A; 8738 C; 8434 G; 13064 T; 0 U; 0 Other; Length 46340; 46; AATAGAGCTATAACACTCACCGCATGGCCCCAAGATTCCATTCCTTGGTATC Autoimmune disease; HERV-7q; chromosome 7q; immunotherapy; Indels Score 643.4; DB 3; Pred.                                                                                                                                                                                                                                                                                                                           | Sequence 5640, Application US/09949016
| Sequence 5640, Application US/09949016
| Patent No. 681239
| GENERAL INFORMATION:
| APPLICANT: VENTER, J. Craig et al. |
| TITLE OF INVENTION: POLYMORPHSMS IN KNOWN GENES ASSOCIATED |
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF |
| FILE REPERENCE: CLOU3307 |
| CURRENT APPLICATION NUMBER: US/09/949,016 |
| CURRENT PILING DATE: 2000-04-14 |
| PRIOR APPLICATION NUMBER: 60/241,755 |
| PRIOR FILING DATE: 2000-10-03 |
| PRIOR FILING DATE: 2000-10-03 |

US-09-949-016-11757/c
Sequence 101757, Application US/09949016
Patent No. 681239
GENERAL INFORMATION:
PAPLICANT: WENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WINDER: US/09/949,016
CURRENT APPLICATION NUMBER: 05/04-14
PRIOR APPLICATION NUMBER: 60/241,755
                                                                                                            66921
                                                                                                                                                                                                                                                                                                                                                                                                                            66511
                                                                                                                                                                                                                                               66741
                                                                                                                                                                                                                                                                                                                                                                                  66571
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    66391
                                                                 66981

Sequence 1708, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REPERENCE: CLOOL337

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-04-14

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VEXTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,755

General 11770, Application US/09949016

patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REPERENCE: CLOOD1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR PILING DATE: 2000-10-03
PRIOR APPLICATION NUMBER: 60/231,498
PRIOR FILING DATE: 2000-09-08
PRIOR FILING DATE: 2000-09-08
NUMBER OF SEQ ID NOS: 207012
SOFTWARE: PRESEEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15811 AGGCATTTGAGCAAGGGGGCAACCCCTTTGGATCCCCTACCCTTGTATAGCAGCTCT 15752

Sequence 146564, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VBYTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS: METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WIMBER: US/09/949,016

CURRENT FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-10-03

PRIOR PLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTHARE: PSELSE for Windows Version 4.0

SEQ ID NO 146564

J Gequence 44296, Application US/09949016

Patent No. 681233

GENERAL INPORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CLOL1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR PLLING DATE: 2000-10-03

PRIOR PLLING DATE: 2000-10-03

PRIOR PLLING DATE: 2000-10-03

PRIOR PLLING DATE: 2000-10-03

PRIOR PLLING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PESELSEQ for Windows Version 4.0

LENGTH: 601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  770
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            830
